

LIGHTHOUSE PROJECT

AGILITY

©SPROUT

Enterprises operate in a dynamic world,
where needs and requirements constantly change.

For those, who are able to timely recognise and actively co-
develop these transformations,
change constantly opens up
promising chances and attractive innovation opportunities.

AGILITY

In theory,...

because in real live,
examples of how to implement agile ways of dealing with changes
into the existing procedures, optimised for efficiency and stability,
are frequently missing.

That is why we support our clients in creating organisation-specific application examples, which let usability and impact of agile ways of working become perceptible and repeatable in the daily development work.

AGILITY

Therefore we accompany a real innovation project, by selection and application of useful agile methods and show, how to integrate them smoothly and effectively into the existing development approaches.

AGILITY

In the actual doing,
structures and thinking patterns, which could potentially impede an effective application
of the new methods, become visible and hands manageable.

This way, not only the success for one innovation project is substantially increased.

The immediate effect of the applied methods especially excites the involved team members and makes them enthusiastic promoters of the new techniques and solution approaches.

AGILITY

In many ways the lighthouse project
becomes a widely visible demonstrator of success,

which serves as a practicable blueprint, for the use of agile techniques
and makes re-application highly attractive to the whole organisation.

at **SPROUT**

NEW WORKING

cross-functional, self-managed teams of sponsors, experts and project members enable quick and adequate response to upcoming challenges

SCRUM

short iteration loops and regular retrospectives foster continuous adjustment of the development project focus toward changing requirements

LEAN STARTUP

the identification of business opportunities and risks right from the start, allows a clear focus of product development on those features that matter most for future success

DESIGN THINKING

the user centred, impartial solution perspective leads to attractive products with a high customer value, even for uncharted challenges
